

# Enabling Location Services in Mobile Settings- iOS

Modified on Mon, 12 May, 2025 at 11:41 AM

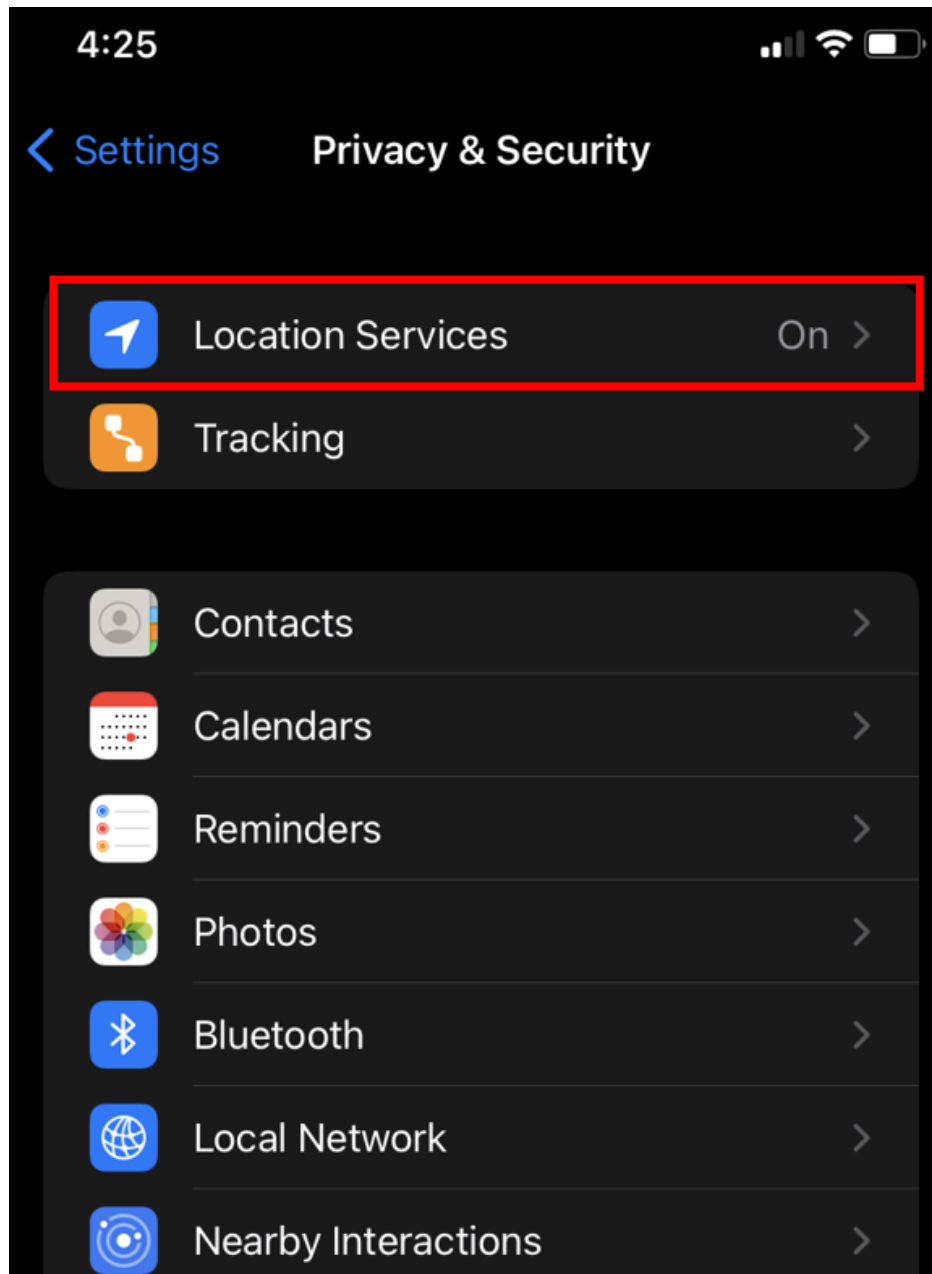

1. From the home screen click on **Settings** (gear icon).

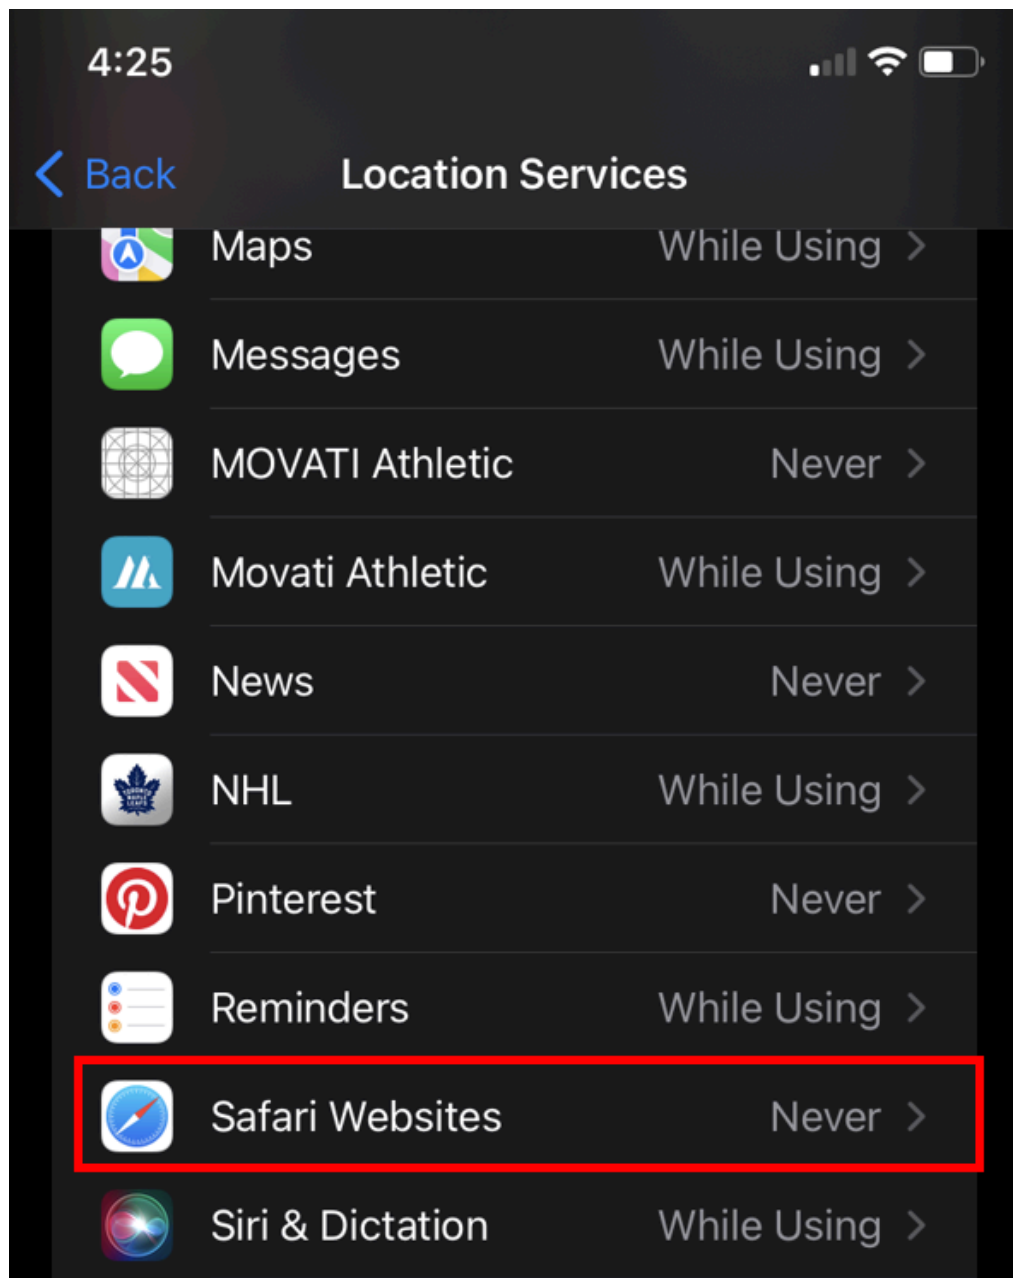

2. Scroll down and click on **Privacy & Security** (hand icon).

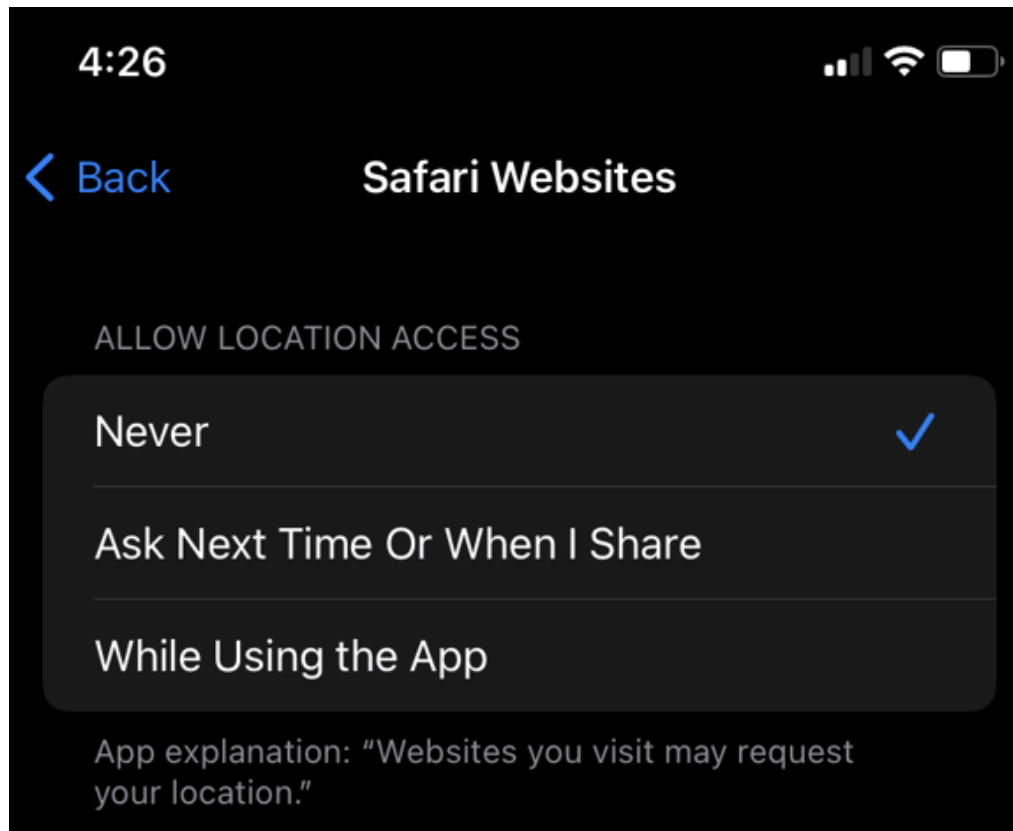

3. Click on **Location Services** at the top of the screen.

4. In location services scroll down and click on the **Safari website**.

5. After clicking on Safari website, you will come to a screen that says Allow Location Access. If "Never" is checked off, you need to **check off** either "**Ask next time**" or "**While using the App**". After you purchase you can change it back to "Never".

6. Once you allow location access, we advise that you **close the Safari browser** window, launch a new window and return to the raffle site.
